

Mini Project

SCS 3212 – Mobile Application Development

Marks

The mini-project contributes 40% of your overall mark in SCS 3212 – Mobile Application Development. Therefore, it will be marked as follows:

- Mobile app source code and viva will be graded out of 100 marks.

Specification

You must develop a Flutter App that serves a purpose of your liking. But it should have the following features.

- Mobile Application must use Firebase Authentication.
- Mobile Application must store data in Firebase Firestore Database.
- Mobile Application should have **at least 04 business modules**. (A business functionality should cover a meaningful user interaction workflow, not just a CRUD implementation)

Submission

You'll have to submit a single zipped file containing all the source files in your flutter project.

To minimize the zip file size, it is advised to run the “Flutter Clean” command first. You are also advised to test the steps your marker will follow to verify that everything works fine (i.e., unzip the file, build and run the app).

Name the zip file as <index no>.zip (Eg: 18001289.zip).

Due Date

You have **seven (07) days** from the date of the last exam paper for the 3rd Year 1st Semester Examination to submit.

Viva

Viva schedule and instructions will be published later.
